

Getting started with SciDB

1. To connect to the SciDB server, connect to 129.7.243.241 with user "scidb" using Secure Shell Client.
2. After logging in the server, run "iquery" to enter the utility.
3. If the server instance is not on, run:

```
scidb.py startall [dbname]
```

The database we have created on the SciDB server is named SciDB-Single.

Getting started with Vertica

1. Use Secure Shell Client to connect 129.72.243.242, by user "dbadmin".
2. If you want to add or drop a database, restart or stop the cluster instances, run "admintools", if you only need to implement queries, run "vsql".
